## DocuBrain® TechDoc 8 Build 09/08/2014 Release Notes

These release notes only document changes for the TechDoc 8-1 patch dated 09/08/2014. Please consult the original release notes for more information about changes from TechDoc 7 to TechDoc 8.

### New Features and Improvements

#### **DM-602: Add Support for Hyper-V V2 in the *tdvmctrl* Utility**

*tdvmctrl* is used to render documents to PDF. A recent Microsoft security update for Windows Server 2012 broke Hyper-V V1 backwards compatibility, which *tdvmctrl* depended on. This update allows *tdvmctrl* to communicate via the new Hyper-V V2 namespace to control a render VM that is running on a Windows Server 2012. *tdvmctrl* still supports the Hyper-V V1 namespace when talking to Windows Server 2008 R2.

### Problems Resolved

#### **SM-120: Cannot Search on Text Containing Forward Slashes**

A problem was reported where searching on a revision of N/A was returning an error. The Lucene classic parser was changed to use forward slashes for expressions. Unfortunately, TechDoc uses forward slashes in doc number, titles, revisions, etc. We need to add support for escaping forward slashes in search values so that Lucene does not detect them as invalid regular expressions.
