

DocuBrain® Workflow Editor

A POWERFUL YET EASY TO USE BPMN WORKFLOW EDITOR

KEY FEATURES

- WYSIWYG Editor
- BPMN 2.0 Compliant
- Connects to TechDoc and Activiti Workflow Engines
- Collaborative process modeling
- BPMN Fragments
- Form Editing
- Process Deployment
- Model Validation

KEY BENEFITS

- Simple, Intuitive Interface
- Leverage Industry Standard BPMN to Define Your Workflow Processes
- Workflow Reduces Cost, Our Editor Reduces Time to Create and Deploy Those Workflows

DocuBrain Workflow Editor

The DocuBrain Workflow Editor is a WYSIWYG (What You See Is What You Get), drag and drop editor that let's you quickly build business processes using industry standard BPMN (Business Process Model and Notation).

The editor tightly adheres to the BPMN 2.0 standard and is custom tailored for the Activiti™ workflow engine. It allows users the ability to graphically model business processes following the BPMN standard and deploy them directly to a running Activiti workflow engine like the one contained within TechDoc, our electronic document and records management product.

Using our collaborative process modeling, different users can create, view, and modify processes at the same time. A user can also connect to different process repositories during the same editing session.

The editor supports BPMN fragments. A fragment can contain an entire workflow or a small portion of a workflow that you frequently use. To create a fragment, simply place one or more elements onto a process diagram and save it as a fragment. To use it, simply click on the Fragments tab, then drag and drop the fragment onto the current process diagram.

The DocuBrain Workflow Editor provides model validation to locate errors early in the creation and modification process to reduce the chance of errors reaching production. Also, the editor tries to balance issue detection and reporting so that you are not bombarded with errors that result simply because you haven't complete the next step yet.

Our editor provides all the features you would expect in a quality editor; nearly unlimited undo/redo, alignment controls, grids, rulers, zooming, etc. We also provide lots of BPMN specific extras like form editing, XML source views, repository upload/download, and more.

So Why BPMN?

Business Process Model and Notation (BPMN) is a graphical notation that depicts the steps in a business process. The BPMN

DocuBrain®

standard is developed and maintained by The Object Management Group (OMG), which is an international, open membership, not-for-profit technology standards consortium.

So why is this important to you? Simply put, our Workflow Editor is easy to use. The real expertise and skill comes from the ability to document and capture your business processes. BPMN has been developed to provide users with a royalty free notation. This means it is easy to find books, training, and consultants to help you whether they know our specific editor or not.

In addition, BPMN is understandable at a higher level for business users and at a lower level for process implementers. Yes, suits and geeks can communicate using BPMN! Take the following example for paying an invoice. Business users can look at this actual BPMN process and understand how invoices are paid from a high level. Only the process implementer needs to understand which Java class is actually called in the service task to queue up a check to be printed.
